

### IPA Unicode Table for English Sounds

The following table lists the Unicode character values (in hexadecimal) for all of the IPA symbols we will be using in class that are not readily available on a keyboard. If you are using Word, do the following to insert a character into your document:

- (1) Make sure that Doulos SIL is set as the active font for your document.
- (2) Look up the value of the symbol you need from the following table.
- (3) Type the 4-digit code, and immediately press ALT-x on your keyboard.

For example, if you need to type [ŋ] look in the table and note that the Unicode value for [ŋ] is 014B. Type the sequence 014b on your keyboard (you don't have to use uppercase letters), and immediately press ALT-x. (Do not put a space after typing the Unicode value.) The sequence 014b will be replaced by the ŋ character.

Or, if you are someone who feels comfortable writing your own keyboard map, the following Unicode values are what you need.

Char.	Value
g	0261
ʔ	0294
ŋ	014B
θ	03B8
ð	00F0
ʃ	0283
ʒ	0292
tʃ	02A7
dʒ	02A4
ɹ	0279
r	027E
ɻ	026A
ɛ	025B
æ	00E6
ə	0259
ʌ	028C
ɑ	0251
ʊ	028A
ɔ	0254
